Office Action Summary

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a cell culture medium deficient in a compound, classified in class 435, subclass 404+.
- II. Claims 8-30, drawn to methods of preparing a cell culture medium/eluant, classified in class 435, subclass 404+ and class 530, subclass 413+.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by processes other than chromatography/affinity chromatography. For example, a steroid deficient serum can be prepared by charcoal stripping. An antibody deficient serum can be prepared by precipitation with ammonium sulfate or with PEG.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and different required searches, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

In the event Group I is elected the embodiments in which the compound is a serum antibody, a cytokine, a hormone, a growth factor, a peptide, serum albumin an MHC binding protein fragment/peptide, viral antigens, bacterial antigens, a complement protein.

In the event Group II is elected the embodiments in which the first protein/cell culture product is a monoclonal antibody, a cytokine, a growth factor, an MHC protein; or in which the second protein/compound is a polyclonal serum antibody, a cytokine, an MHC binding protein or fragment, a growth factor.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 3, 8-15, and 18-22 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
